
Cashless Casino

A payment system for online
and physical gaming

NChain

Revolutionise physical gaming with cashless payment systems

nChain's Cashless Casino solution has been designed to allow casino and gaming operators to directly request micro-payments from multiple users across multiple assets in a real-time and secure transaction, at low cost. Therefore, providing a better operating cost and a low friction player experience.

Our solution enables land-based operators to support digital wallets and payments across their physical gaming platforms.

Casino operators can issue their own digital casino chips in exchange for fiat currency, facilitating a more streamlined playing experience by not having to withdraw cash to convert to chips.

Highlights

- Cashless/touchless
- Mobile wallet/connect with KYC & 'gaming passport'
- Easy QR code scanning
- Instant payouts
- Bypassing expensive ATM fees

Reduce risk and save money with blockchain technology

Features
