

Token-based peer-to-peer electronic cash system.

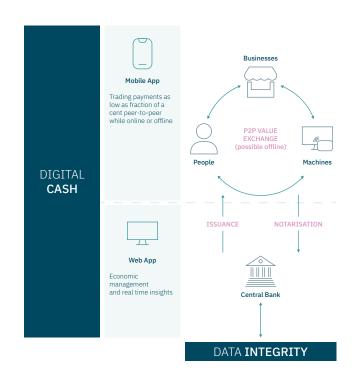

OVERVIEW

A product for to issue tokens that can be exchanged within an economy, and without the need for third parties to facilitate an exchange.

Tokens represent currency issued by central banks.

The system itself ensures transactions are valid and tokens are not already spent, recording every transaction to the blockchain. The central bank can then monitor and manage overall supply in real-time.

Digital Cash supports offline payments and microtransactions between people, businesses (merchants) and even machines: for example automating IOT device communication.

FEATURES

Direct micropayments

Offline transactions

Mint, distribute, burn tokens

Real-time data analytics

BENEFITS

Safeguard user privacy

Reduce payment, minting fees

Avoid unnecessary third parties
